A
FISH
CAN
DROWN

In breathing, a fish uses up the oxygen contained in the water. If oxygen is not put back, the fish will drown. Many aquarists unknowingly keep their pets on the verge of drowning, and only avoid actual catastrophe by frequently changing the water.

Plants put oxygen into the water, but are satisfactory only when properly illuminated and proportioned.

Best results are obtained when the aquarium is continuously aerated by releasing a stream of fine air bubbles from a submerged porous stone, connected by a small rubber tube to an air pump. The fish will live and thrive, and change of water will be practically unnecessary.

The **White Mist** air pump was developed expressly for aeration. A few of its advantages are that it never requires oiling; it is built to run continuously at a cost of less than 6c per month for electricity. This is approximately 1/10 of the usual cost for other methods of aeration. The pump is practically silent, and does not interfere with the radio. There are no bearings or pistons to wear.

The **White Mist** air pump is an extremely simple and long-lived mechanism. Its working principle* briefly, is as follows:

A U-shaped steel bar, vibrated by an electro-magnet, works a sturdy little bellows. The bar is tuned to synchronize with the vibrations of the alternating

current. The pumping impulses are so rapid (120 times a second) that the air flows from the outlet tube in a smooth, luxurious stream. This smooth stream of air, coupled with a fine-grained releaser stone, will result in very tiny air bubbles. Tiny bubbles are most desirable, as they readily dissolve into the water for perfect aeration. Your pets require the prickly tang of oxygen to give them new life and color. They will fairly revel in this near approach to a lively, sparkling jungle stream.

PRICES—In ivory and black lacquered case— \$7.50
 (4x4x8 1/2-in.) East of Rockies 7.90
 Glass-topped model 9.50
 East of Rockies 9.90

WHITE MIST AIR PUMP

Aerates 1 to 8 aquariums.
 Costs about 6c per month to run.
 Is quiet.
 Never needs oiling.
 Does not interfere with radio.
 Guaranteed for a year.

SPECIFICATIONS

Type Vibrator
 Volts 105-120
 Cycles 50 or 60
 Watts 1.85
 Pressure 4 1/2 lbs.
 Air Flow 30 cu. in.
 (under usual operating conditions.)

NIPOGOLD DE LUXE

AUTOMATIC AQUARIUM THERMOSTAT CONTROL

(Adjustable Unit)

"The Silent Watchman"

NIPPON GOLDFISH CO.

1919-21 BUSH STREET
SAN FRANCISCO, CALIF

INSURANCE FOR YOUR FISH

The finny inhabitants of a well balanced aquarium have a body temperature dependent on the temperature of the water in which they live. This desired temperature should be maintained always at some definite degree, for instance 75, 77 or 78 degree. Most delicate Tropical Fish do best at any of the above set temperatures, but immediately when sudden changes in temperature occurs, there results the susceptible "chills" and "ich" developments.

"NIPOGOLD" AUTOMATIC THERMOSTAT controls are scientifically designed to automatically maintain the water in an aquarium at a constant, even temperature which is so vital to the life and health of the Tropical Fish. **Nipogold Thermostats** are carefully constructed with the best of materials and have proven to be thoroughly reliable and accurate in performance.

"NIPOGOLD" THERMOSTAT UNITS consist of a temperature sensitive element assembled on a substantial bakelite material and entirely set in a glass tube. Corrosion is therefore eliminated, and the entire mechanism is visible at all times.

Protect your TROPICAL FISH pets for the future span of life by investing in a dependable thermostat. And remember, the thermostat pays for itself by the amount of electricity it saves within the period of three to four months. Your first cost is your last. **A Guaranteed Nipogold "De Luxe" Thermostat for only \$2.75.**

CHECK THE BIG TEN FEATURES OF THE NIPOGOLD THERMOSTAT

1. Guaranteed for one year against defects in materials and workmanship.
2. Adjustment is made possible from the top of the thermostat and is very easily adjusted without removing same from the aquarium. (The "Junior" model, adjustment is made from the inside)
 - (a) To increase temperature of the aquarium turn screw a quarter turn for a rise of one and a half degree. To decrease turn screw to the left.
3. Underwriters' approved all rubber cord.
4. A three way outlet plug to provide for as many heaters.
5. A condenser is installed to absorb all radio interference.
6. Heavy duty silver contact points which will not stick and burn out.
7. Fully insulated with no danger of shocks or short circuits.
8. Encased in all glass test tube so that it will not corrode.
9. Will control an aggregate heater capacity of 400 Watts. A. C. or D. C. 110-220 volts.
10. Absolutely accurate and holds within one degree temperature of desired temperature.

This little instrument, with all the goodness of above features, is an unfailing watchman that guards the health of your fish with an unvarying accuracy by automatically regulating the heat in the tank. It is sturdily built of finest materials and will not corrode or affect the water harmfully in any way.

"NIPOGOLD" JUNIOR DE LUXE MODEL AQUARIUM THERMOSTAT CONTROL

Same as DE LUXE model, with the exception of an inside adjustment screw in the Junior Model.

Junior DE LUXE MODEL\$2.25

"CHASE" CHROME AQUARIUM HEATER

"Chase" heaters are made of the best materials and are built to withstand the abuse ordinarily given an electric heater when used in an aquarium.

The shell is made of chromium plated brass tubing and cannot be broken by a sudden change of temperature or by being dropped.

The "Chase" heater is designed to lay on the bottom of the aquarium where the heat really belongs. The design is such as to afford the best possible circulation of the heated water, and is also easily concealed among the aquarium plants so that it will not mar the beauty of the aquarium.

These heaters are guaranteed for two years from date of purchase against defective workmanship or material.

Heaters may be had in the following wattages:

20, 40, 60 Watts	\$2.00 Each
75, 100, 150 Watts	\$2.25 "

Caution: Do not turn on current until heater is submerged in water.

HOW TO DETERMINE CORRECT WATTAGE OF HEATER

To figure the approximate wattage for a given size aquarium, multiply the number of gallons by 3 watts. For example, a 5 gallon tank will take a 15 W heater. This gives a temperature of about 12 degree above the atmospheric temperature. This rule applies where the heater is not controlled by a thermostat.

When using a thermostat, multiply the number of gallons by 6 watts, (using a 30 W heater for 5 gallons) which will give you a 25 degree rise above the room temperature.

The above temperatures are not guaranteed as it is impossible to allow for many elements that tend to cause a variation of a degree or two.

TROPICAL FISH FOOD

BE SURE TO FEED YOUR TROPICAL FISH, with a varied diet; and let it consist of "NIPOGOLD" Tropical Food, "Glandex", Ground Shrimp and "Bio-Vita"

To accomodate our customers, Live Brine Shrimp is gathered about once a week, usually on Monday afternoons. Tropical fish should be fed with this Live Shrimp about once a week.

NIPOGOLD AQUARIUMS

"NIPOGOLD" AQUARIUMS are of high quality, and they are not expensive. By specializing in what we have found to be the best selling sizes, and using modern methods of manufacture, we are able to offer these aquariums at the following reasonable prices. All "Nipogold" Aquariums are guaranteed against defective material and workmanship. The following prices include a balanced Aquarium.

SEVEN POINTS OF SUPERIORITY

1. Made of National known products.
2. Modern design and construction
3. Careful, experienced workmanship
4. Pleasing, lasting appearance.
5. Guaranteed from leakage for 1 year.
6. Lowest price for quality given.
7. Backed by continued experience

TROPICAL FISH AERATION EQUIPMENT

WHY USE ARTIFICIAL AERATION ? WHY FILTER AQUARIUM WATER ? "Because the concentration of fish and plant life in an Aquarium is much higher than is ever found in the natural state. Therefore artificial aids are necessary to maintain a satisfactory oxygen condition and to remove impurities caused by decaying plant matter and the natural elimination of the fish. The wise aquarist will avail himself of all artificial aids possible in order to assure himself that the water in the Aquarium will always be acceptable to the most delicate fish"

MARCO PRODUCTS

MARCO PUMPS:

A good pump maintains the oxygen condition in the Aquarium and should operate smoothly and efficiently. It should be self-starting, non reversing and built to give years of service. Marco Air Pumps meet all these specifications.

MODEL "A" PUMP -----	\$16.00
For 12 releasers.
